Report description:

India air coolers market was valued at USD339.64 million in 2022 and is expected to grow at a CAGR of 9.04% in the forecast period, 2023-2028, to reach USD1625.52 million by 2028F. The market is driven by the factors such as the rise in the disposable income of middle-class families and the ongoing process of rural electrification across the country. Also, the emergence of online sales channels and the continuous evolution in technology are expected to create lucrative growth opportunities for the India air coolers market in the forecast period.

The demand for air coolers is majorly dependent on the climate witnessed in the country. The climate in most of the country is hot, and the seasons are long, which begin in April and end in October, and the temperature often reaches 45°C during summer. The cost of running and the electricity consumed by the air coolers are much less than the air conditioners, making them affordable for consumers. The efforts to make electricity reach each remote location of the country and the development of the rural areas are expected to fuel the demand for air coolers across the country.

The India air coolers market is segmented into organized vs. unorganized sectors, regional distribution, and competitive landscape. The unorganized segment dominated the market with a market share 69.68% in 2022. The unorganized sector is expected to maintain its dominance over the forecast period due to the continuous entry of new market players and the availability of air coolers at comparatively lesser prices. Unorganized distribution channels can be seen even at remote locations, making them highly accessible to consumers.
