Report description:

E-vapour and heated tobacco continued to register growth in 2021, with even higher growth than the previous year. Its rising consumers base consists of former cigarette smokers and also young adults, especially students, with no previous history of consuming tobacco products. However, in 2021, smoking prevalence in terms of e-vapour products remained marginal, while the high cost of heated tobacco products and their limited distribution/availability mean that smoking prevalence is insignificant.
