Report description:

KEY FINDINGS

The Spain home insecticides market is anticipated to rise with a 3.15% CAGR during the forecasted years, 2022 and 2028. Utility of insecticides in everyday household chores, innovative product formulations, and proliferation of insects due to lack of fumigation drive the market growth.

MARKET INSIGHTS

Home gardens have been important to Italy's local food systems and family farming. Therefore, manufacturers have formulated various pesticide treatments for residences, making farming and local food easier. Further, pesticides and insecticides are used daily, like weed killers for the yard, ant and roach sprays in the kitchen, mosquito repellents outside mildew, and cleaners in the bathroom. Pesticides have become a common practice for protecting gardens and homes from insects and pests.

Furthermore, the national lockdown during COVID-19 lasted for three months in Spain, making it impossible to carry out the fumigation works for the summer. As a result, tiger mosquitos and other insects abounded in some areas in Italy. The increase in demand for home insecticides in the warm areas compensated for its lack of interest in cooler areas of the country, driving the overall demand for home insecticides in Spain.
