Global Green Concrete Market Report and Forecast 2022-2027

Market Outlook

According to the report by Expert Market Research (EMR), the global green concrete market is aided by the growing construction industry. The market is projected to grow at a CAGR of 10.4% between 2022 and 2027.

Green concrete is described as concrete that utilises waste material as a minimum of one of its components, or in some other way is environmentally friendly. This can be through a production process that is environment-positive or its lifecycle sustainability, or high performance that extends its lifespan. Factors such as good thermal resistance and fire resistance, and flexural strength of green concrete are almost equal to that of conventional concrete, aiding the market growth of green concrete globally.

Moreover, the compressive strength behaviour of green concrete and the water cement ratio as compared to conventional concrete is anticipated to drive the green concrete market demand across the world. Based on the application, the commercial segment is expected to fuel the market growth during the upcoming years on account of the rise in green cement usage in commercial establishments like offices, shopping malls, spaces, hospitals, and theatres.

Geographically, the Europe region is expected to register growth in the green concrete market share on account of the strict rules relating to carbon emissions along with an upsurge in taxes which is likely to be imposed on industrial emissions.

The reduction of the CO2 emissions by the concrete industry by 30% coupled with the upsurged concrete industry's usage of waste products by 20% is likely to drive the market growth of green concrete during the forecast period. With no environmental pollution and a relatively sustainable development process, green concrete has less need for frequent repairs or maintenance and in comparison to conventional concrete, has better workability. These are some of the major aspects expected to fuel the green concrete market demand across the globe.

Several companies undertaking research and development activities to improve technology is expected to propel the market growth. Such companies often use various raw materials to acquire cost-effective green cement mixtures. Thereby, these initiatives as well as advancements by producers are projected to offer productive opportunities for market growth during the forecast period.
