#### KEY FINDINGS

The Australia & New Zealand stem cell market is anticipated to rise with a CAGR of 10.50% over the estimated period. While the base year considered for the market study is 2021, the forecast years are from 2022 to 2028. The market growth of the country is driven by key factors such as increasing healthcare expenditure as well as favorable government support.

#### MARKET INSIGHTS

In 2019, the University of Melbourne and Stem Cells Australia was granted \$104.65 million by the federal government for congenital heart diseases, stroke, dementia, blindness, and kidney diseases. Moreover, they also received \$2.09 million for the advancement of stem cell research directed toward novel treatments in the year 2018. As a result, favorable government support and assistance for both firms and universities play an essential role in positively influencing the country's market growth. On the other hand, the public health system in New Zealand has been providing stem cell bone marrow transplants for several years, especially for patients with cancer. In addition, a collection of private clinics has also been established in the country. These medical facilities offer stem cell treatments to patients suffering from various conditions, such as joint problems, auto-immune diseases, sports injuries, and neurological problems. Hence, owing to the aforementioned factors, the stem cell market in Australia & New Zealand is anticipated to progress at a steady rate over the forecasted years.
