**Report description:**

The SAM patient engagement technology market is expected to grow from US\$ 884.07 million in 2022 to US\$ 2,295.22 million by 2028; it is estimated to grow at a CAGR of 17.2% from 2022 to 2028.

Advancements in technology will have a significant impact on the healthcare industry. The smartphone is one of the fastest-growing segments in the technology sector, and it has a proven significant impact on the healthcare sector. Smartphones are making day-to-day chores easier, and the technology is also streamlining care for both physicians and patients. According to a new survey, hospitals are making significant investments in smartphone and secure mobile platforms to enable communications between clinicians and patients. For example, purpose-built devices can be integrated with in-hospital patient call systems, so nurses are paged when a patient hits the call button, further increasing responsiveness. The increasing penetration of smartphones and growing wireless network technology supports improvements in digital healthcare systems with novel opportunities to address more challenges associated with accessibility, quality, effectiveness, efficiency, and healthcare costs. Smartphones are increasingly being used by the common populace for accessing healthcare applications. The increasing use of smartphones is expected to trigger the use of mobile-based applications by healthcare providers and patients to streamline
