Report description:

KEY FINDINGS

The North America epilepsy devices market is predicted to increase with an 8.01% CAGR by the end of the forecast period, 2022-2030. The key players in the region are spending extensively on the research and development of new products, getting new product approvals, and innovating technologies, driving the market growth.

MARKET INSIGHTS

The North America epilepsy devices market growth assessment includes the evaluation of the United States and Canada. According to the Canadian Epilepsy Alliance, there are around 260,000 epileptics in Canada. 78,000 of them, or 30%, have drug-resistant epilepsy. Canada's healthcare system is funded by public and private sectors, primarily private insurance and out-of-pocket expenses. Spending on public health care in Canada has increased and is anticipated to support market expansion. The population of Canada has increased, and decision-makers in the health system must consider the effects of this growth on the prospective demand for healthcare services in the future.

The greatest demographic segment in recent Canadian history is reaching 65. The consensus is that an aging population would result in higher demands for medical services and a faster pace of increase in health spending. Hospitals in Canada now have more installed and operational computed tomography (CT) and magnetic resonance imaging (MRI) machines. The capacity of medical imaging technologies to identify more anomalies has expanded hospital services.
