Report description:

The airborne ISR Market was valued at USD 6.6 billion in 2021 and is projected to record a CAGR of over 6% during the forecast period 2022-2031.

The COVID-19 pandemic and the resultant lockdowns resulted in a sudden dent in the GDPs of several countries. Also, the pandemic demanded huge and impulsive spending toward the healthcare systems in countries, leading to a scarcity of economic resources. Although the global military spending increased in 2020, this factor is expected to force countries to take a conservative approach toward their future military budgets, thereby hampering the airborne ISR market during the forecast period. The pandemic has resulted in severe disruptions in the supply chains of major ISR programs and has reduced production output. Delays in several developments projects in the airborne ISR industry have also been observed. These factors have negatively impacted players in the related market.

The airborne ISR market is expected to grow as ISR usage is increasing and more countries are adopting ISR technology for securing their borders. Rapid technological developments are breeding disruptive technologies in the defense industry. The increasing use of small unmanned systems for surveillance is further expected to generate demand for electronic components used in ISR missions. Advanced data integration with a multi-level comparative analysis to provide data accuracy and management may provide new market opportunities for the airborne ISR market.

Airborne ISR Market Trends

Unmanned Segment to Experience Highest Growth During the Forecast Period

UAVs have emerged as veritable tools for ISR missions and are, hence, in high demand globally as they provide low-cost alternatives to nations planning to procure aerial assets for ISR and other missions. The emergence of new technologies and platforms has transformed the warfare strategies of nations such as the US, Russia, and China. UAVs are being used extensively in

current warfare scenarios due to their visual superiority and capability of performing pre-emptive strikes and surveillance on specific locations. With nations showing a preference for asymmetric warfare, it is expected that UAVs would be deployed in large numbers to collect crucial information that can act as a key decision-making tool. Hence, several nations and defense contractors are significantly increasing R&D investments to enhance their airborne ISR capabilities. For instance, in November 2021, UAE's government-owned EDGE Group launched a series of new additions to its product portfolio of locally developed advanced unmanned aerial vehicles (UAVs), including the QX-5 and QX-6 modern vertical take-off and landing (VTOL) drones that are built for intelligence, surveillance, and reconnaissance (ISR) applications, border security, and other military operations. Thus, the increasing adoption of electronic warfare is expected to drive the demand for superior ISR equipment aboard UAVs, thus, fueling the growth of the unmanned segment of the airborne ISR market.

North America Dominated the Market in 2021

North America held the largest market share by geography in 2021. The US is one of the leading investors involved in the modernization of its defense capabilities. The US government and US DoD are planning to begin divesting a few aerial platforms to provide resources to fund emerging ISR capabilities that can penetrate and collect data in the highly contested environment. The Air Force conducts ISR missions to analyze, inform, and provide joint force commanders with the knowledge needed to achieve advantageous decisions. In April 2021, the US Army's Requirements Oversight Council approved the requirements for its Future Attack Reconnaissance Aircraft in the form of an Abbreviated Capabilities Development Document (A-CDD) that validates the designs developed by the two companies competing to build the aircraft. Lockheed Martin's Sikorsky and Bell are in a head-to-head competition to build prototypes and fly them beginning in November 2022. The Army is also in the process of bringing online a second technology demonstrator called ARES or Airborne Reconnaissance and Electronic Warfare System after awarding a contract to L3Harris Technologies in November 2020. ARES is based on a Bombardier Global Express 6500 jet that will have a different signals intelligence package on it than Artemis. There has been significant interest in multi-mission maritime patrol aircraft in the US in recent years, which has led to the US placing more orders for maritime patrol aircraft in order to increase its maritime surveillance capabilities. Such developments are expected to drive market growth in the region during the forecast period.

Airborne ISR Market Competitor Analysis

The airborne ISR market is highly fragmented, with multiple players developing ISR platforms and subsystems for various armed forces. Northrop Grumman Corporation, Boeing, Elbit Systems Ltd, Lockheed Martin Corporation, and Raytheon Technologies Corporation are some of the prominent players in the market. However, several local players collaborate with the market incumbents on regional projects to design and integrate smaller subsystems that effectively serve the specific requirements of the regional end-user defense forces. Vendors are competing based on their in-house manufacturing capabilities, global footprint network, product offerings, R&D investments, and a strong client base. Vendors must provide state-of-the-art systems to airborne ISR integrators to survive and succeed in the intensely competitive market environment. A majority of the defense OEMs integrate third-party EO/IR equipment onboard their airborne ISR platforms and try to minimize R&D costs involved in the cross-integration of such systems onboard different platforms.

1 INTRODUCTION

1.1 Study Assumptions and Market Definition

Scotts International. EU Vat number: PL 6772247784

tel. 0048 603 394 346 e-mail: support@scotts-international.com

www.scotts-international.com

- 1.2 Scope of the Study
- 1.3 Currency Conversion Rates for USD

2 RESEARCH METHODOLOGY

3 EXECUTIVE SUMMARY

- 3.1 Market Size and Forecast, Global, 2018 - 2031
- 3.2 Market Share by Type, 2021
- 3.3 Market Share by Application, 2021
- 3.4 Market Share by Geography, 2021
- 3.5 Structure of the Market and Key Participants
- 3.6 Expert Opinion on Airborne ISR Market

4 MARKET DYNAMICS

- 4.1 Market Overview
- 4.2 Market Drivers
- 4.3 Market Restraints
- 4.4 Porter's Five Forces Analysis
 - 4.4.1 Bargaining Power of Buyers/Consumers
 - 4.4.2 Bargaining Power of Suppliers
 - 4.4.3 Threat of New Entrants
 - 4.4.4 Threat of Substitute Products
 - 4.4.5 Intensity of Competitive Rivalry

5 MARKET SEGMENTATION (Market Size and Forecast by Value - USD billion, 2018 - 2031)

- 5.1 Type
 - 5.1.1 Manned
 - 5.1.2 Unmanned
- 5.2 Application
 - 5.2.1 Maritime Patrol
 - 5.2.2 Airborne Ground Surveillance (AGS)
 - 5.2.3 Airborne Early Warnings (AEW)
 - 5.2.4 Signals Intelligence (SIGNIT)
- 5.3 Geography
 - 5.3.1 North America
 - 5.3.1.1 US
 - 5.3.1.1.1 By Type
 - 5.3.1.2 Canada
 - 5.3.1.2.1 By Type
 - 5.3.2 Europe
 - 5.3.2.1 United Kingdom
 - 5.3.2.1.1 By Type
 - 5.3.2.2 France
 - 5.3.2.2.1 By Type
 - 5.3.2.3 Germany
 - 5.3.2.3.1 By Type
 - 5.3.2.4 Russia
