Report description:

Report Synopsis

Antimicrobial Coatings are especially significant in the medical & healthcare sector because of the risk of healthcare associated infections (HAIs). The use of these coatings enables in minimizing the propagation and risk of microbes and germs that can typically be found on frequently touched surfaces, such as switches, doorknobs, computer keyboards, household appliances and the like. The use of antimicrobial coatings on catheters, surgical devices, medical instruments & trays and medical electronics has also grown exponentially, more so after the COVID-19 pandemic hit the world.

North America, Europe and Asia-Pacific are estimated to corner a combined share exceeding 85% of the global antimicrobial coating demand in 2022, with North America being the largest and Asia-Pacific anticipated to be the fastest growing. To some extent, developed regions in North America and Europe already had some presence of antimicrobial technology in place, be it in the form of coatings or in the form of disinfectants, sanitizers and antibiotics. However, with advancement in technology in Asia-Pacific, the demand for antimicrobial coatings has increased and will continue to do so over the coming years.
