Report description:

KEY FINDINGS

The India hospital gowns market is predicted to record a 12.82% CAGR during the estimated period of 2023-2030. The growing number of surgical procedures, an increase in the prevalence of various diseases, and a surging geriatric population drive the market growth in the country.

MARKET INSIGHTS

The growth of the hospital gowns market in India during the forecast period is expected to be driven by several factors, such as an increase in the prevalence of different diseases, a rise in the geriatric population, the presence of various local market players, and an increase in surgical procedures. According to the Technical Group on Population Projections for India and States 2011-2036 report, there were nearly 138 million senior people in India by the end of 2021, and this number is projected to increase to 225.428 million by 2050. This anticipated rise in the older population is likely to lead to an increase in the incidence of chronic diseases, which will drive the demand for hospital gowns and spur market growth.

Moreover, the significant number of surgical procedures carried out in India is expected to contribute to the growth of the hospital gowns market. A report published in the World Journal of Surgery revealed that 4642 procedures were performed annually for a population of 88,273 people in September 2020. Cataracts, Caesareans, fracture procedures, and hernias were among the most frequent, thereby driving the demand for hospital gowns.
