Report description:

MARKET INSIGHTS

Over the last four decades, oral health awareness has rapidly increased in Japan, with public health efforts likely to result in enhanced dental care in the upcoming years. The country is also one of the high-income nations across the Asia-Pacific, which further increases the demand for dental treatments.

Conversely, the population in Japan is aging faster than in other countries. Aligning with this, the Health and Welfare Ministry estimates suggest that the geriatric age group, over the age of 65 years, will account for 40% of the country's population by 2060. Therefore, the rising prevalence of dental and oral illnesses, coupled with the surging elderly populace, is anticipated to expand the dental sterilization market growth in Japan over the projection period.
