### **Report description:**

#### KEY FINDINGS

The Asia-Pacific dental sterilization market growth is set to evolve at a CAGR of 6.72% during the forecast period 2022-2032. The surging adoption of new technological trends and the rising number of oral diseases are expected to play an essential role in fueling the region's market growth.

#### MARKET INSIGHTS

South Korea, India, Japan, China, Vietnam, Australia & New Zealand, Indonesia, Thailand, and Rest of Asia-Pacific are evaluated for the Asia-Pacific dental sterilization market growth assessment. With the surging dental awareness in Japan, public health efforts are set to improve dental health for kids, as well. There is also a growing burden of dental and oral diseases in the country, which contribute to the increasing need for dental sterilization. Moreover, the aging population is projected to account for 40% of the population by 2060, as per the Health and Welfare Ministry. This provides a conducive customer base for dental procedures in Japan, subsequently boosting the demand for dental sterilization.

On the other hand, in Thailand, oral cancer cases are on the rise. The country has also witnessed severe and widespread dental problems compared to its Asian counterparts. At the same time, cost-effective dental treatment has benefited dental tourism significantly. Therefore, these factors are expected to contribute to the overall growth of the Asia-Pacific dental sterilization market during the forecasting period.
