### **Report description:**

#### **KEY FINDINGS**

The China botulinum toxin market is set to record a 10.31% CAGR during the forecast period, 2023-2030. Growing demand for botulinum toxin for medical and cosmetic purposes is driving the market growth in China.

#### **MARKET INSIGHTS**

Botulinum toxin has been proven effective in reducing headache frequency and severity, making it a popular treatment for chronic migraine in China. The prevalence of migraine is high, especially among the population aged between 40 and 49, which is expected to drive demand for botulinum toxin in the country.

The cosmetic use of botulinum toxin is also on the rise in China, with only two products currently cleared for marketing in the country. However, with new market players seeking to enter the Chinese market, the industry is expected to expand. For instance, Galderma received approval for Restylane products from the National Medical Products Administration in China in 2020, allowing for expanding the Restylane portfolio in the country.

As more market players emerge in China, the industry is anticipated to grow further. It presents opportunities for new players to enter the market and compete with established players. However, the country's regulatory challenges may constrain the market's growth during the forecast period. The rising demand for botulinum toxin for medical and cosmetic purposes in China is expected to drive market growth in the coming years.
