### **Report description:**

The global sapphire glass market size reached US\$ 1,076 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 2,817 Million by 2028, exhibiting a growth rate (CAGR) of 17.6% during 2023-2028.

Sapphire glass is a synthetically manufactured crystal that exhibits similar hardness as diamond, which makes it highly durable. Typically produced in cylindrical sticks, called boules, the production of sapphire glass is an expensive, energy-intensive and slow process. It features high resistance to thermal shock with a melting point of 2030 degrees Celsius, coupled with a compressive strength of 2000 mega Pascals, which makes it stronger than stainless steel. The durable properties of sapphire glass make it ideal for use in the manufacturing of consumer electronic devices that utilize digital output displays, such as tablets, smartphones and laptops. Other than this, sapphire glass is also used in the production of products such as watches, bullet-proof glass, windows of armored vehicles, and visors or screens in military body armor suits.

In recent years, there has been a significant rise in the usage of sapphire glass in various sectors, including defense, military, safety equipment and medical devices. In the defense and aerospace industries, sapphire glass is widely utilized in commercial aircraft, such as Gulfstream, and military platforms, such as the F-35 Joint Strike Fighter. Besides this, manufacturers across the globe are increasingly using this material in the production of transparent armor systems, countermeasure systems, electro-optical windows, and vision systems. The escalating demand for sapphire glass can also be attributed to the increasing production of medical surgical systems, where it is used in optical medical analysis devices. Moreover, sapphire glass is widely required in volatile industrial environments, such as in the petrochemical industry, that experience harsh conditions, and high temperatures and pressure. This requirement has prompted industry players to manufacture more versatile products, such as sapphire glass windows that can be installed in flame detectors and analyzers for hazardous materials and combustible gas leaks.
