Report description:

Market Overview:

The global intravenous solutions market size reached US\$ 14.0 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 19.6 Billion by 2028, exhibiting a growth rate (CAGR) of 5.8% during 2023-2028.

Intravenous (IV) solutions are supplemental fluids comprising water, electrolytes, sugar, and medications. They are given to patients according to their requirements, medical condition, age, and body size to restore fluid volume and treat electrolyte balance. At present, they are widely used in IV therapy to replace electrolyte losses, administer drugs and blood products, and supply essential nutrients to the intravascular fluid compartment.

Intravenous Solutions Market Trends:

Due to the sudden outbreak of coronavirus disease (COVID-19), there is a rise in the demand for IV solutions worldwide to provide essential nutrients to patients in the intensive care unit (ICU). Apart from this, the increasing number of people who have diabetes, cancer, gastrointestinal disorder, and neurological diseases represents another major growth-inducing factor. Moreover, the faster response time and higher efficacy associated with IV solution therapy is contributing to market growth. It is used to overcome chronic dehydration that can cause fatigue, memory problems, irritability, and other medical conditions. This, along with the increasing participation of individuals in physical activities, is influencing the adoption of IV solutions for a fast recovery. IV solutions are also utilized to improve skin conditions and treat migraines and hangovers. Besides this, leading manufacturers are introducing easy-to-use, portable product variants that can be used as drips at home. Additionally, due to rising environmental concerns, they are developing premixed solutions that reduce the amount of packaging waste. Furthermore, rising investments by health agencies of numerous countries in the healthcare sector are anticipated to create a favorable market outlook.
