### **Report description:**

In line with the rest of the world, mobile phones experienced a decline in sales in retail volume terms in 2022 with this pattern continuing into 2023. This follows a very negative December campaign during 2022, which is normally one of the most profitable periods of the year due to the popularity of Black Friday. Sales continued falling despite the important promotional push made by brands and retailers as they looked to clear stock that had built up during the year as demand fell.
