Report description:

Market Overview:

The US LED downlight market size reached US\$ 4.3 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 6.8 Billion by 2028, exhibiting a growth rate (CAGR) of 7.7% during 2023-2028.

LED downlights are defined as recessed light fixtures which are mounted into a hollow opening in a ceiling. These lights are extensively used across residential and commercial spaces. LED downlights are energy efficient as well as eco-friendly lighting solutions, which emit light in the downward direction with a narrow beam. These lights have a relatively longer lifespan with minimum heat radiation. They currently find wide applications in shopping malls, offices, living rooms, kitchens, bathrooms, etc.

LED downlights are proficient of enduring tough conditions such as external shocks and vibrations, extreme weather conditions, and traffic-related public exposure, etc. This has resulted in LED downlights turning into one of the most favoured choices for outdoor lighting systems. In addition, the sales of these lights are also proliferating since they consume a significant lower amount of electricity and emit lesser amount of ultraviolet (UV) rays and heat. Apart from this, on account of the rising prices of electricity in several developing economies, the governments are taking initiatives to encourage the widespread incorporation of LED lights across various sectors.
