### **Report description:**

Market Overview:

The North America bioherbicides market size reached US\$ 580 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 1,266 Million by 2028, exhibiting a growth rate (CAGR) of 13.8% during 2023-2028.

Bioherbicides are a type of pesticides that are applied to the plants for preventing the growth of weeds. They are composed of fungi, bacteria and viruses, and insects such as painted lady butterfly and parasitic wasps. Bioherbicides are sustainable, cost-effective, environment-friendly, and they control the rising level of soil and crop toxicity. Owing to these factors, bioherbicides are widely utilized in foliar feeding, soil applications, seed treatment and post-harvest in the agriculture sector.

At present, North America represents as one of the largest markets for bioherbicides owing to the rising environmental awareness in confluence with the increasing preferences for organic farming. Bioherbicides are formulated in such a way that they do not generate residue build-up in the environment, thereby reducing their related effects and residue management costs. Apart from this, bioherbicides are also employed in the treatment of gardens, golf courses and railway tracks in the region.

IMARC Group's latest report provides a deep insight into the North America bioherbicides market covering all its essential aspects. This ranges from macro overview of the market to micro details of the industry performance, recent trends, key market drivers and challenges, SWOT analysis, Porter's five forces analysis, value chain analysis, etc. This report is a must-read for entrepreneurs, investors, researchers, consultants, business strategists, and all those who have any kind of stake or are planning to foray into the North America bioherbicides market in any manner.
