Indonesia Cold Chain Logistics Market Report and Forecast 2023-2028

Market Outlook

According to the report by Expert Market Research (EMR), the Indonesia cold chain logistics market reached a value of USD 4.72 billion in 2022. Aided by the growing demand for perishable food products, pharmaceuticals, and the e-commerce boom in Indonesia, the market is projected to further grow at a CAGR of 10.1% between 2023 and 2028 to reach a value of USD 8.21 billion by 2028.

Cold chain logistics involves the storage and transportation of temperature-sensitive products through a thermal and refrigerated packaging method. This supply chain ensures that products maintain their quality and longevity by keeping them in a specific temperature range, thus playing an indispensable role in the transport of food, pharmaceuticals, chemicals, and other perishable items.

Indonesia, with its vast archipelago, varying climatic conditions, and booming consumer market, presents unique challenges and opportunities for cold chain logistics. The increasing consumption of fresh produce, dairy, meat, and seafood by the burgeoning middle class has significantly driven the Indonesia cold chain logistics market demand.

Furthermore, Indonesia's healthcare sector has seen substantial growth, particularly in the realm of biopharmaceuticals and vaccines. These products require stringent temperature control throughout their storage and transportation lifecycle, further underlining the criticality of robust cold chain logistics.

The rapid growth of e-commerce platforms in Indonesia is another pivotal factor augmenting Indonesia cold chain logistics market growth. Online grocery shopping, which necessitates efficient last-mile cold delivery solutions, has become a trend in urban areas, fuelled by the ongoing digital transformation and increased smartphone penetration.

Additionally, the Indonesian government's initiative, known as the "National Logistics System", aiming to improve the overall logistics infrastructure and efficiency in the country, has provided a boost to the cold chain sector which further adds value to the Indonesia cold chain logistics market size. Public-private partnerships and foreign investments are being encouraged to enhance the cold chain infrastructure, especially in the eastern part of Indonesia.

Technological advancements like IoT integration for real-time temperature monitoring and the development of energy-efficient refrigeration systems are also expected to drive the market forward. In the backdrop of these developments, various global and
