Report description:

As the prices of food have been soaring, retailers are focused on bringing consumers the lowest prices possible for essential products such as drinking milk products. This means that farmers and producers do not really have much room to increase their prices even as the costs of manufacturing increase. Furthermore, loadshedding (rolling blackouts) means that manufacturers have had to invest in backup energy supplies, and deal with the spoilage of milk which cannot be processed before it is too late.

Euromonitor International's Drinking Milk Products in South Africa report offers in-depth knowledge of the market at a national level, providing local insight and understanding unavailable elsewhere. In addition to the latest retail sales data 2018-2022, it identifies the leading companies, brands and retail outlets, and assesses the key trends and demographic shifts behind consumer demand and sales growth.
