- Custom Research License \$7500.00

**Report description:**

The France Food Amino Acids Market, valued at USD 945.97 million in 2022, is poised for robust growth throughout the forecast period, projected to exhibit a Compound Annual Growth Rate (CAGR) of 6.53% until 2028 and is expected to reach at USD 1371.15 million by 2028. The dynamic evolution of France's food and beverage industry, characterized by innovative product launches and an extensive array of consumer choices, underscores the market's potential. Amino acids, now integral components in diverse food and beverage products, span from dairy and meat alternatives to functional beverages and nutritional supplements. Notably, specific amino acids, such as glycine and hydroxyproline, play pivotal roles in enhancing the textural attributes of edibles and beverages, especially in relation to gelatin derived from collagen-rich animal tissues. This is exemplified by the 2021 scenario where U.S. exports of consumer-ready foods to France, amounting to USD 312.2 million, saw a 4% decrease from 2020. Correspondingly, France imported USD 273.6 million worth of U.S. processed foods in the same year.

Gelatin, widely adopted for its gelling and stabilizing attributes, enriches products like confectionery, desserts, and certain beverages. Employing food amino acids to enhance texture and stability empowers manufacturers to ensure consistent and desirable product attributes, reinforcing consumer satisfaction. As the emphasis on health and wellness intensifies, consumers gravitate toward edibles and beverages that combine exceptional taste with nutritional value. This trend positions amino acids as a strategic avenue for manufacturers to bolster their products with essential nutrients tailored to specific health requirements. In particular, branched-chain amino acids (BCAAs) - leucine, isoleucine, and valine - garner traction in sports nutrition products due

[www.scotts-international.com](http://www.scotts-international.com)

to their contributions to muscle protein synthesis and post-workout recovery. Such amino acids are prevalent in protein shakes, bars, and sports beverages, catering to both fitness enthusiasts and athletes. Moreover, the incorporation of essential amino acids into dietary supplements and functional foods facilitates access to vital nutrients essential for overall well-being.

Amino acids, beyond their nutritional implications, play a pivotal role in appetite regulation, metabolism, and cognitive function. For instance, phenylalanine and tryptophan serve as precursors for neurotransmitters such as serotonin and dopamine, exerting influence over mood and satiety. Evidently, 59% of the French population has used food supplements within the past 24 months, with vitamins, minerals, and Omega 3/6/9 being the most frequently consumed. These dietary supplements, fortified with specific amino acids, aid in appetite control, curbing overeating, and instilling a sense of fullness, thus facilitating weight management.

Certain amino acids, such as tyrosine and L-DOPA, contribute to dopamine production, enhancing focus, memory, and mood regulation. Furthermore, arginine and citrulline promote enhanced blood flow and nutrient delivery to the brain, potentially enhancing cognitive performance.

## Key Market Drivers

### Rising Health Awareness: An Impetus for Growth

France's evolving dietary landscape reflects a significant shift in consumer attitudes toward health and nutrition. This transformation has catalyzed the demand for Food Amino Acids as consumers proactively seek products offering specific health benefits. As public concern escalates over lifestyle-related diseases like obesity, diabetes, and cardiovascular conditions, consumers prioritize health-enhancing products. With amino acids being essential to muscle repair, immune support, and neurotransmitter regulation, their adoption is poised to rise in tandem with heightened health consciousness.

### Growing Demand for Sports Nutrition

France is witnessing a surge in fitness participation, prompting the demand for sports nutrition products enriched with amino acids for enhanced muscle recovery, performance, and endurance. Amid this trend, amino acid-fortified products like protein bars and shakes are gaining prominence, catering to athletes and fitness enthusiasts aiming to meet their protein requirements while optimizing training outcomes.

## Key Market Challenges

### Raw Material Scarcity

Amino acid production relies on raw materials sourced from both plant-based and animal-based origins. Escalating global demand for protein-rich diets and plant-based alternatives has created competition for these resources, impacting their availability and cost. Factors like weather conditions, soil quality, and environmental variables influence the production of amino acid-rich raw materials. Such inconsistencies can lead to fluctuations in resource availability, exacerbated by global trade dynamics and geopolitical tensions.

### Quality Control and Traceability

Maintaining the authenticity of amino acid sources is pivotal, especially considering differences between synthetic and naturally derived amino acids in terms of nutritional content and functional characteristics. Rigorous quality control measures are necessary to ensure accurate amino acid proportions, particularly given the wide range of food items they are used in. Moreover, the potential for allergenic raw materials and microbial contamination necessitates meticulous testing and labeling practices.

## Key Market Trends

### Plant-Based Protein Uptake

**Scotts International. EU Vat number: PL 6772247784**

tel. 0048 603 394 346 e-mail: [support@scotts-international.com](mailto:support@scotts-international.com)

[www.scotts-international.com](http://www.scotts-international.com)

Consumer preferences in France are steering toward healthier, more sustainable dietary choices. The emergence of plant-based diets aligns with this trend, pushing consumers toward plant-based proteins derived from legumes, nuts, seeds, and grains. As ethical considerations influence dietary choices, plant-based proteins are gaining traction as individuals seek to avoid supporting industries associated with animal cruelty.

#### Personalized Nutrition

Advances in genetic testing, wearable devices, and microbiome analysis enable personalized dietary plans. This data-driven approach tailors amino acid consumption to individual genetic compositions and health needs. This trend paves the way for amino acid supplements catering to precise genetic variations and related health considerations.

#### Segmental Insights

##### Type Insights

The glutamic acid segment dominated the 2022 market and is expected to maintain this lead. With its distinctive properties and extensive applications, glutamic acid plays a pivotal role in enhancing flavors in diverse food products. Renowned for enhancing the umami taste, glutamic acid and its derivatives are widely used as natural flavor enhancers in dishes spanning soups, sauces, snacks, and processed foods. The prospect of innovating existing and new flavor profiles amplifies its significance.

##### Application Insights

In 2022, nutraceuticals and dietary supplements spearheaded market dominance, a trend set to persist. The burgeoning sports and fitness industry fuels demand for amino acid-enriched products that facilitate muscle recovery, endurance, and energy among athletes and fitness enthusiasts. The convenience and efficacy of nutraceuticals and dietary supplements cater to busy lifestyles while ensuring adequate amino acid intake.

#### Regional Insights

The central region emerges as a market leader, benefiting from robust industrial and agricultural infrastructure. The capacity of this infrastructure to support multiple facets of the amino acid supply chain - from production to processing and distribution - is instrumental. Such well-developed regions often attract investments, fostering industry growth and dominance.

##### Key Market Players

- Evonik Industries AG
- Koninklijke DSM N.V.
- Merck KGaA (Sigma-Aldrich Solutions)
- Brenntag SE
- Daesang Corporation
- Amway Global Inc
- BASF SE (Nuritas Ltd.)

##### Report Scope:

In this report, the France Food Amino Acids Market has been segmented into the following categories, in addition to the industry trends which have also been detailed below:

- France Food Amino Acids Market, By Type:
  - o□Glutamic Acid
  - o□Lysine
  - o□Tryptophan
  - o□Methionine
  - o□Phenylalanine
  - o□Others

**Scotts International. EU Vat number: PL 6772247784**

tel. 0048 603 394 346 e-mail: [support@scotts-international.com](mailto:support@scotts-international.com)

[www.scotts-international.com](http://www.scotts-international.com)

-□France Food Amino Acids Market, By Source:

o□Plant

o□Animal

o□Synthetic

-□France Food Amino Acids Market, By Application:

o□Nutraceuticals & Dietary Supplements

o□Infant Formula

o□Food Fortification

o□Convenience Food

o□Others

-□France Food Amino Acids Market, By Region:

o□Northern

o□Southern

o□Western

o□Eastern

o□Central

Competitive Landscape

Company Profiles: Detailed analysis of the major companies present in the France Food Amino Acids Market.

## **Table of Contents:**

1.□Product Overview

1.1.□Market Definition

1.2.□Scope of the Market

1.2.1.□Markets Covered

1.2.2.□Years Considered for Study

1.2.3.□Key Market Segmentations

2.□Research Methodology

2.1.□Objective of the Study

2.2.□Baseline Methodology

2.3.□Key Industry Partners

2.4.□Major Association and Secondary Sources

2.5.□Forecasting Methodology

2.6.□Data Triangulation & Validation

2.7.□Assumptions and Limitations

3.□Executive Summary

3.1.□Overview of the Market

3.2.□Overview of Key Market Segmentations

3.3.□Overview of Key Market Players

3.4.□Overview of Key Regions

3.5.□Overview of Market Drivers, Challenges, Trends

4.□Voice of Customer

5.□France Food Amino Acids Market Outlook
