Japan started promoting its semiconductor lighting technology as early as 1998 with its "21st Century Lighting Project," and is regarded as one of the earliest nations to initiate LED industry policies. Although till 2010, the Japanese government remained unsuccessful in promoting LED lighting as standard-setting was delayed. But the industry gained momentum after the March 2011 earthquake in Fukushima, when all the nuclear power plants running in the country were closed and resulted in a huge power supply gap. To resolve the problem of power shortages, the Japanese government phased-out incandescent light bulbs and started focusing on the implementation of energy efficient LED lighting systems. Japan today has one of the highest penetration rates for LED's. The LED market in Japan is fairly concentrated with Nichia Corporation representing the biggest player in the country.
