Report description:

United States acetone market demand stood at 1514.8 Thousand Tonnes in 2021 and is forecast to reach 2174.51 Thousand Tonnes by 2030, growing at a healthy CAGR of 3.19% until 2030. Demand for Acetone in the United States is anticipated to grow remarkably in the forecast period primarily due to the large-scale production of chemical compounds like polycarbonate and Methyl Methacrylate (MMA) on their growing demand across various end-use industries. Furthermore, growing awareness among people over maintaining proper hygiene and cleanliness as a consequence of rising health consciousness upraised the demand for its key derivative Iso Propyl Alcohol. Due to the outbreak of COVID-19 in 2020, the world economy was disrupted. The market was affected drastically, and production and manufacturing units were shut down. Furthermore, the major market players intentionally halted the production keeping their employee's health and wellness in mind. With imposed new regulations of the COVID-19 and proper precautions, the market is anticipated to regain its growth in the years to come. The pandemic is slowly being subsided and the effects are tried to be overcome by various methods. Once the market regains the full function of its production unit, the market is bound to show robust growth in the forecast period.
