Report description:

Taiwan Phenol market demand stood at 947.2 Thousand Tonnes in 2020 and is forecast to reach 1494.7 Thousand Tonnes by 2030, growing at a healthy CAGR of 4.50% until 2030. Bisphenol A (BPA) and phenolic resins hold the largest market share accounting for nearly two-thirds of the country's total Phenol demand. Expansion of the downstream plant capacities is contributing to increasing the demand for polycarbonate which is a Phenol derivative. Phenol is commercially viable and can be converted to plastics and other stated materials thereby boosting the demand for Phenol in Taiwan.

COVID-19 pandemic had a severe impact on the market, in general, and disrupted the country's economy. The manufacturing units were closed for a significant amount of time and disturbed the distribution channels. The rising threat of mass death convinced the government to maintain lockdown methods keeping the markets at a halt. The government is slowly controlling the consequences, and steadily market is regaining its composure. Once the market regains the full function of its production unit, the market is bound to show robust growth in the forecast period.
