Report description:

United Kingdom LPG industry stood at 1.59 Million Tonnes in FY2021 and is forecast to reach 5.75 Million Tonnes by FY2030, growing at a healthy CAGR of 13.60% until FY2030 owing to its increased adoption of cleaner fuels across versatile industries. LPG is a versatile fuel serving a diverse group of industries, possessing low carbon characteristics thereby, one of the most appropriate alternatives to conventional fossil fuels. Because of its ease of transport and abundance in the European region, the country is keenly considering the use of LPG across several end-use industries and strengthening its LPG distribution networks. Due to the outbreak of COVID-19 the economy faced a downfall. The demand for LPG in commercial use declined while the demand for LPG in residential spaces witnessed a boost. Due to the increase in demand for LPG across various end-user industries the market is expected to witness growth in the forecast period.
