Report description:

North America Phenol demand stood at 2.47 Million Tonnes in 2020 and is forecast to reach 3.60 Million Tonnes by 2030, growing at a healthy CAGR of 3.8% until 2030. The growth can be attributed to the strong demand for polycarbonate (PC) resins from the region's exponentially growing construction and automotive industry. Furthermore, the hefty investments across the housing and other large infrastructure projects are expected to further drive the demand for Phenol from the construction sector. North America's expansive automotive market further provides a huge scope for the consumption of Phenolic and Epoxy Resins. In addition, Phenol finds diverse applications in the preparation of dyes, explosives, lubricants, pesticides, and plastics. Hence, the growing industrialization activities are further expected to drive the North America Phenol market.

The COVID-19 caused a major disruption in the infrastructural and industrial activities as the production facilities were shut down to restrict the movement of personnel, which negatively impacted the North America phenol market. However, as the governments are easing down lockdown restrictions, the demand for Phenol has reinstated in the usual volumes across various end-user industries, which is likely to influence the North America Phenol market.

Under this subscription, you would be able to access North America Phenol market demand and supply analysis on a cloud-based platform for one year.
