Report description:

Ethylene Vinyl Acetate demand in South America stood at 0.21 Million Tonnes in 2020 and is forecast to reach 0.312 Million Tonnes by 2030, growing at a healthy CAGR of 4.02% until 2030. South America's EVA demand is expected to increase two-fold during the period due to rising demand for the chemical in footwear and adhesive industry. Besides, the growing packaging industry in the region due to the rising food & beverage industry is set to increase the demand from packaging end-use. With the rising population in countries like Brazil, the demand for shoes and other footwear is also growing, which is likely to fuel the South America EVA chemicals market during the forecast years. Furthermore, the rising awareness about the usage of solar power has been adding to the demand of EVA for the manufacturing of solar cell modules, which is likely to influence EVA market growth in the region in coming years. The COVID-19 outbreak led to declined demand for EVA in the footwear industry due to restricted mobility, however, an exponential increase of the chemical in the packaging industry was observed.
