**Report description:**

North America Bisphenol S stood at 0.01 Million Tonnes in 2020 and is forecast to reach 0.095 Million Tonnes by 2030, growing at a healthy CAGR of 19.91% until 2030. North America is one of the major regions catapulting BPS consumption due to the growing food & beverage, construction, and retail sectors. The rising trend for online shopping and increase in related warehousing operations are expected to fuel the Bisphenol S demand as the chemical is widely used in the packaging industry. Moreover, expansions in end-use industries have fueled the growth of the BPS market in the region. For instance, in 2017, market player Solvay expanded its global production capacity in sulfone polymers (by-product for bisphenol S) in the United States. Besides, there has been a gradual replacement of Bisphenol A by Bisphenol S as the latter is less toxic and relatively safer for the environment. United States Food and Drug Administration (US-FDA) has already amended its regulations to restrict the use of BPA-based polycarbonate resins in baby bottles and sippy cups as well as BPA-based epoxy resins as coatings in packaging for infant formula and undertaken initiatives to expand BPS application. This is expected to push the demand for Bisphenol S further in North America. The COVID-19 outbreak disrupted the demand for Bisphenol S due to a decline in economic activities. However, rising commercialization and industrialization activities owing to ease down of lockdown restrictions are expected to further propel the North America Bisphenol S market growth during the forecast period.
