**Report description:**

Europe plastic recycling market stood at 22.90 Million Tonnes in 2020 and is forecast to reach 34.234 Million Tonnes by 2030, growing at a healthy CAGR of 4.03% until 2030. Increasing usage of plastics due to their lightweight, durable, and inexpensive properties have generated a huge waste that is causing damage to the environment. Growing consciousness on energy savings and the need to reduce the carbon footprint is likely to play a positive role in increasing the demand of the plastic recycling market. Besides, the rising demand for plastic recycling from other end-user industries such as packaging, pharmaceutical, food & beverages, automobile, etc., is creating an exponential demand for plastic recycling to reduce the burden on the environment. In 2018, Agilyx started a pilot project of 10TPD capacity to produce Styrene Monomer by Chemical Recycling of GPPS and HIPS polymer. Now, Ineos Styrolution plans to use this technology to set up a 100KT Styrene monomer manufacturing facility to produce Styrene Monomer by 2025, which is expected to contribute to the market growth of Europe Plastic recycling market during the forecast period. The COVID-19 pandemic led to an exponential increase in plastic demand due to the extensive use of PPE kits, masks, ready-to-eat food items, and drugs, etc. However, the government is taking prompt initiatives to accelerate plastic recycling in order to reduce environmental stress, which is likely to positively impact the growth of the plastic recycling market in the region.
