Report description:

North America Plastic recycling market stood at 36.03 Million Tonnes in 2020 and is forecast to reach 53.548 Million Tonnes by 2030, growing at a healthy CAGR of 3.91% until 2030. The growing need to reduce plastic waste due to environmental concerns has created a significant demand for plastic recycling in North America. In the USA, several states offer tax credits to promote plastic recycling. Plastic recycling also has the advantage of energy-saving compared to virgin plastic manufacturing, due to which many companies are investing in plastic recycling technologies. The rising demand for plastics in the packaging, automotive, electrical & electronics industry along with concerns of landfill pollution from the increasing use of plastics is also set to increase the demand of the plastic recycling market. The COVID-19 outbreak resulted in the exponential use of plastics for the manufacturing and packaging of essential items such as masks, PPE kits, medicines, food and beverage items, etc. Therefore, the government is taking stringent measures to recycle plastic, which is likely to contribute to the positive growth of the plastic recycling market in the coming years.
