Report description:

The South & Central America cardiac microcatheter market is expected to grow from US\$ 22.69 million in 2023 to US\$ 30.42 million by 2028. It is estimated to record a CAGR of 6.0% from 2023 to 2028.

Growing Use of Percutaneous Coronary Intervention (PCI) for Treating Chronic Total Occlusions (CTO) Fuels South & Central America Cardiac Microcatheter Market Growth

Percutaneous coronary intervention (PCI) is one of the most difficult procedures for treating of chronic total occlusions (CTO), resulting in successful recanalization of CTO. Further, CTO is complete or near-complete blockage of one or more coronary arteries. The blockage usually lasts approximately three months due to plaque build-up within a coronary artery. Significant progress has been made in this area over the past decade, given the novel product launches and approvals. However, the launch of new technical devices and strategic refinements are still being monitored in the procedures to combat CTOs as the microcatheters are used as a coronary interventional tool. This tool provides a therapeutic approach to complex coronary interventions such as bifurcation lesions, tortuous anatomy, ostial location, coronary calcification, angled takeoffs, and CTO. Terumo's FineCross MG microcatheter integrates cross ability and guidewire support for treating challenging cases including tortuous vessels, CTOs, bifurcations, as well as severely stenosed and calcified lesions. Therefore, the growing usage of PCIs for treating CTO is catalyzing the cardiac microcatheter market growth.
