Rise in Number of Traumatic Brain Injuries Fuel Asia Pacific Skull Clamp Market

Traumatic brain injuries (TBIs) often occur due to severe sports injuries or road accidents. There are four main types of TBIs-concussion, contusion, penetrating injuries, and anoxic brain injuries. The symptoms of TBIs differ with the extent of damage to the brain. In developing countries like India, severe TBI has a mortality rate of more than 30% and can cause significant morbidity in 60%-70% of the cases. In India, more than 100,000 lives are lost every year with over 1 million suffering from serious head injuries. With such a high prevalence of TBIs, the number of brain surgeries performed is increasing in various countries, in turn, boosting the use of skull clamps for head fixation.
