Report Synopsis

The number of individuals afflicted with type-2 diabetes has been increasing at a fast pace and excessive weight gain has been a major factor that has been associated with the incidence of type-2 diabetes, with reduction in weight being high on the recommendations list of preventing and managing diabetes. In this context, low-calorie sweeteners offer an ideal substitute to added sugars, with the potential of assisting in losing and maintaining weight through limiting intake of calories.

Xylitol is widely used as a sugar substitute and the interest in xylitol has increased considerably in recent years, due to many commercial applications in different markets such as food, dental related products, and pharmaceuticals. Driven by increasingly health and weight conscious consumers, xylitol demand is expected to grow in sugar-free and low-calorie food products. Asia-Pacific xylitol consumption is estimated to account for 47.4% share globally in 2023 and projected to consume about 171 thousand metric tons by 2029.
