North America Tomato Market Report and Forecast 2024-2032

Market Outlook

According to the report by Expert Market Research (EMR), the North America tomato market grew significantly in 2023. Aided by the growing demand for fresh produce and the increasing production of tomatoes, the market is expected to grow by 2032.

Tomatoes, being one of the most versatile fruits, are a staple ingredient in many recipes across diverse cuisines. They are rich in vitamins C, potassium, and are notably known for their high lycopene content, a type of antioxidant that is beneficial for heart health and cancer prevention. Besides their nutritional benefits, tomatoes are widely used in numerous industries due to their taste-enhancing properties, including the food and beverage, cosmetics, and pharmaceutical sectors.

The increasing consumer preference for healthy food choices is propelling the North America tomato market growth. As the awareness of the health benefits of consuming tomatoes rises, there is a growing shift towards diets that include this nutrient-rich fruit. Moreover, the growing trend of home cooking and gardening, amplified by the COVID-19 pandemic, has led to an increase in the demand for fresh tomatoes.

The wide-ranging applications of tomatoes in different industries also contribute to the North America tomato market expansion. In the food and beverage industry, tomatoes are used as a key ingredient in the production of various products like sauces, soups, juices, ketchup, and salads. The cosmetic industry leverages the antioxidant properties of tomatoes in the formulation of skincare products. The pharmaceutical industry, on the other hand, makes use of the health benefits of tomatoes in the production of health supplements and medicines.

Furthermore, the increased focus on organic farming and sustainable agricultural practices is boosting the demand for organic tomatoes. With the rise in environmental consciousness and health awareness, more consumers are opting for organic and locally grown tomatoes, positively impacting the North America tomato market outlook.

The tomato processing industry is another significant factor influencing the market dynamics. The increased consumption of processed tomato products such as canned tomatoes, tomato paste, tomato juice, and tomato sauce, especially in the foodservice industry, is stimulating the expansion of the tomato market.

Moreover, advancements in agricultural technology, including controlled environment agriculture (CEA) like greenhouse and vertical farming, have resulted in year-round availability of tomatoes, fuelling the North America tomato market demand. These
