North America Mobile E-Learning Market Report and Forecast 2024-2032

Market Outlook

According to the report by Expert Market Research (EMR), the North America mobile e-learning market is projected to grow at a CAGR of 18.6% between 2024 and 2032. Aided by the escalating demand for flexible learning methods and the expanding applications of mobile e-learning across various sectors, the market is expected to grow significantly by 2032.

Mobile e-learning, also known as m-learning, refers to a learning method that allows learners to access educational material on their mobile devices at any time and place. This form of learning encompasses a wide range of educational activities, from online courses and virtual classrooms to educational apps and games. It plays a crucial role in promoting lifelong learning, enhancing educational access, and facilitating personalised learning experiences.

The increasing demand for flexible learning methods is a major factor driving the North America mobile e-learning market growth. With the ongoing digital transformation, there has been a significant shift towards learning models that allow learners to study at their own pace and convenience, leading to a surge in the adoption of mobile e-learning solutions. Moreover, the COVID-19 pandemic has further catalysed this trend, as traditional classroom-based education faced disruptions due to lockdowns and social distancing measures.

The expanding applications of mobile e-learning across various sectors also contribute significantly to the North America mobile e-learning market share. In the corporate sector, mobile e-learning is used for employee training and development, as it enables businesses to provide their employees with continual learning opportunities in a cost-effective and efficient manner. Meanwhile, in the academic sector, mobile e-learning is utilised to supplement classroom teaching and support distance learning programs. New advancements in digital learning solutions have made it possible for learners to access content from anywhere by removing geographic boundaries and giving interactive capabilities that have enhanced the entire learning experience as a result of the increased use of mobile devices. The knowledge is being communicated via a wide range of digital media, which enhances learning and concept retention. This helps to increase the North America mobile e-learning market share.

Additionally, the rise of gamified learning experiences has further bolstered the popularity of mobile e-learning, aiding the market development. By integrating game mechanics into the learning process, educators can enhance student engagement and motivation, thereby improving learning outcomes. As a result, the demand for gamified mobile e-learning solutions is on the rise
