Report description:

The ASEAN E-commerce Logistics Market size is estimated at USD 6.22 billion in 2024, and is expected to reach USD 11.30 billion by 2029, growing at a CAGR of 14.5% during the forecast period (2024-2029).

When COVID-19 caused a surge in e-commerce throughout Southeast Asia, delivery companies struggled to sustain and expand their success. Southeast Asia's internet retail value increased from USD 495 billion to an estimated USD 581 million. Warehouses were typically 1,000 sq. mt. in size, but demand was for multi-level warehouses that could be 10,000 or 15,000 sq. mt.

Southeast Asia is poised for rapid growth in e-commerce. Five Southeast Asian countries are among the world's fastest-growing e-commerce markets, accounting for half of the top ten. Southeast Asia was previously an e-commerce laggard, digitally overshadowed by China and Japan. However, nearly all of them now have mobile devices and, as a result, internet access. The five countries' mobile penetration rates are all close to 100%.

According to industry sources, Malaysia has a population of 32.8 million people. E-commerce sales in the base year were USD 6.3 billion, up 15% from the previous year. Shopee is the most popular marketplace, followed by PGMall, a local platform that collaborates with JD. The most popular marketplaces are JD, Shopee, and Lazada. The main product categories are electronics and personal care.

Even though the rapid growth of e-commerce is driving logistics development in this market, this remains a challenge for a few countries with complex topography in Southeast Asia. Logistics operation management is a challenge for e-commerce businesses. As economies recover from the global pandemic and income levels rise, the intra-Asian market is expected to expand, with a corresponding increase in demand for express logistics services propelled by the thriving e-commerce sector.

ASEAN E-commerce Logistics Market Trends

E-commerce growth is driving the market

Southeast Asia is experiencing a surge in e-commerce. Consumer trends in the region are creating exciting opportunities for online retailers looking to expand due to massive growth in the digital payments sector. Among product categories, electronics are the most popular in the region. TVs, smartphones, laptops, USB drives, power banks, and other items are among the best-sellers in this category.

On the other hand, clothing, fashion accessories, baby products, and furniture are not far behind, with Southeast Asian markets experiencing higher-than-ever sales in these segments. Live streaming for e-commerce platforms is rapidly expanding in the Southeast Asian market. Statistics show live streaming hours on e-commerce platforms increased by 200% in Malaysia and Singapore. The trend spread to the Philippines, where 60% of brands use live selling to attract more customers to their stores.

The support of social commerce, internet penetration, and demand for some product categories drives the growth of e-commerce in ASEAN countries. The online channel has created a huge opportunity for domestic retailers in various countries. Even though these countries lag in infrastructure and logistics services, the demand for products through the channel is luring investors to dive deeply into the market.

Infrastructure development in south-east Asia supporting the market

The growing global interest in Southeast Asia's infrastructure needs has been exciting and concerning for developing countries. The G7 announced its support for the US-led 'Build Back Better World' (B3W) initiative in 2021, while the European Union unveiled its infrastructure strategy, dubbed 'Globally Connected Europe.'

These initiatives aim to address developing countries' USD 40 trillion infrastructure gap, but they also raise geopolitical concerns by appearing to compete with China's Belt and Road Initiative. Southeast Asian governments do not want to be caught in a geopolitical crossfire over investment decisions. Apart from the massive amounts of capital required, infrastructure in developing Southeast Asian countries suffers more due to poverty and the ever-present threat of climate change. While the infrastructure has improved, more is needed. The majority of the population lacks access to electricity, safe drinking water, and safe roads.

Cities with poor planning and traffic congestion alone cost them a daily loss of productivity, wasted fuel, and increased stress. In addition, the International Monetary Fund (IMF) discovered that countries waste roughly one-third of their infrastructure spending due to inefficiencies.

Meanwhile, in 2023, Southeast Asia witnessed an increasing number of investments in the infrastructure sector. For instance, in March 2023, the Asian Infrastructure Investment Bank (AIIB) granted more than USD120 million to the Seraya Southeast Asia Energy Transition and Digital Infrastructure Fund (the Fund). This investment is aimed at enhancing the region's transition to green energy and technology-enabled infrastructure development, which is also expected to improve cross-border digital connectivity within Asia. Moreover, in February 2023, A.P. Moller Group planned to invest more than USD 750 million in various infrastructure platforms in South and Southeast Asia. Thus, the growing infrastructure sector in the region is expected to create a huge opportunity for e-commerce logistics service providers.

ASEAN E-commerce Logistics Industry Overview

The ASEAN e-commerce logistics market landscape is fragmented as the demand for logistics services is growing rapidly across

the region, and companies are becoming more competitive to capture this opportunity. As a result, international players are making strategic investments to establish a regional logistics network, such as opening new distribution centers and smart warehouses. Some leading players include JNE Express, LBC Express, GD Express, Kerry Express, Ninja Van, and Best Express. To maintain cost competitiveness, companies that operate online prefer to work with third-party courier providers instead of hiring in-house delivery staff. As a result, global companies are actively investing in targeting growth opportunities in the region.

- 3 months of analyst support

Table of Contents:

1 INTRODUCTION

- 1.1 Study Assumptions
- 1.2 Scope of the Study

2 RESEARCH METHODOLOGY

- 2.1 Analysis Method
- 2.2 Research Phases

3 EXECUTIVE SUMMARY

4 MARKET INSIGHTS DYNAMICS

- 4.1 Current Market Scenario
- 4.2 Market Dynamics
 - 4.2.1 Drivers
 - 4.2.1.1 Growing E-commerce Sector
 - 4.2.2 Restraints
 - 4.2.2.1 Complicated Product Returns
 - 4.2.3 Opportunities
 - 4.2.3.1 Increasing Investments in Digital Infrastructure
- 4.3 Value Chain / Supply Chain Analysis
- 4.4 Porter's Five Forces Analysis
 - 4.4.1 Threat of New Entrants
 - 4.4.2 Bargaining Power of Buyers/Consumers
 - 4.4.3 Bargaining Power of Suppliers
 - 4.4.4 Threat of Substitute Products
 - 4.4.5 Intensity of Competitive Rivalry
- 4.5 Insights into Technological Trends and Automation
- 4.6 Government Regulations and Initiatives
- 4.7 Supply Chain/Value Chain Analysis
- 4.8 Insights into the E-commerce Market
- 4.9 Spotlight - Key Hubs for E-commerce Logistics
- 4.10 Insights into Reverse/Return Logistics
- 4.11 Impact of COVID-19 on the Market

5 MARKET SEGMENTATION
