

## **Database Automation - Market Share Analysis, Industry Trends & Statistics, Growth Forecasts 2019 - 2029**

Market Report | 2024-02-17 | 120 pages | Mordor Intelligence

### **AVAILABLE LICENSES:**

- Single User License \$4750.00
- Team License (1-7 Users) \$5250.00
- Site License \$6500.00
- Corporate License \$8750.00

### **Report description:**

The Database Automation Market size is estimated at USD 2.35 billion in 2024, and is expected to reach USD 6.99 billion by 2029, growing at a CAGR of 24.38% during the forecast period (2024-2029).

The increasing volume of data across industries, the need to automate redundant database management processes, automated testing solutions, and the growing need for faster speed to market is expected to grow the demand for database automation across industries. However, the need for human intervention when it comes to data modeling and schema generation might hinder growth.

#### Key Highlights

- While some technology professionals are still consumed with routine operations such as backing up, scaling, tuning, monitoring, and securing critical information systems, autonomous databases make these activities less complicated and time-consuming.
- Modern data pipelines are more complex than traditional ones. New data sources like IoT, formats such as unstructured data, and platforms and languages such as Apache Kafka and Python are creating more complex pipelines. Database automation leverages AI and machine learning to provide full, end-to-end automation for provisioning, security, updates, availability, performance, change management, and error prevention and includes query optimization, automatic memory management, and storage management to provide a completely self-tuning database.
- Vendors in the market are pricing their products on flexible pay-as-you-go pricing models, which reduces the costs of maintaining on-premises data warehouses. For instance, Kerry EAS, a Logistics, shipping, and logistics company in China, uses Oracle's autonomous database. The company reduced the time taken to analyze its 100 million-plus data records from 30 minutes to 10 seconds and significantly reduced IT management costs, and increased return on investment by leveraging the pay-as-you-go model.

-The spread of COVID-19 led to lockdowns in various parts of the globe, putting the IT teams under tremendous pressure due to increased digital loads on mission-critical applications and databases, spiking the demand for database automation. To acquire more customers during this increased demand, the vendors offered free tools and other offerings at a lower cost. The market is expected to grow rapidly in the long term as data grows across industries.

## Database Automation Market Trends

### IT and Telecommunication industry is Expected to Witness Significant Growth

- Telecom is among the sectors with the highest rate of data generation, and companies are offering cloud services mainly oriented to large-scale data integration. As the need for cloud is expanding among telecom clients, the partnership between database automation and telecom companies is becoming a common trend. For instance, Sielte S.P.A., an Italian Telecommunications company located in Italy, opted for Severalnines Cluster Control, a database solution that can operate 24x7 and offered automatic failover and recovery to minimize downtime and ensure a stable service even in the event of a data center going down.
- The increasing demand for applications leveraging machine learning (ML) and deep learning (DL) on a gigantic scale is anticipated to increasingly push database automation vendors to establish a more comprehensive array of artificial intelligence (AI). According to the State of Database Deployments in Application Delivery survey conducted by Liquibase, 57% of all application changes require a corresponding database change. Machine learning and deep learning on large, sparse data sets require a data management system that can store terabytes of data and perform fast parallel computations-tasks for which data automation solutions are ideally suited; hence is growing more rapidly in the IT and telecommunications industry.
- Moreover, increasing emphasis on implementing DevOps to automate the development, deployment, documentation, testing, and monitoring processes between software developers and operations engineers for integrating the development and operations processes to synchronize efficiently, validate, manage, and apply database changes is also proliferating the growth of database automation in the industry.
- Furthermore, the increasing adoption of public and private clouds to efficiently manage humongous data also increases the need for better and cost-effective database automation solutions. For instance, Oracle Autonomous Database combines the cloud's flexibility with machine learning's power. The company claims the solution can reduce administration costs by up to 80% with full operations automation and tuning and runtime costs by up to 90% by billing only for resources needed at any given time.

### North America is Expected to Hold Major Share

- The increasing deployment of Big Data solutions by major IT enterprises to enhance efficiency and streamline their business operations is driving the expansion of data centers in corporate offices. Hence, these enterprises, mainly small and medium enterprises, are adopting containerized and micro data centers over conventional data center infrastructures. These trends are expected to augment further the growth of the database automation market in the region, owing to the dominance of the area in technology adoption.
- The region has maintained continued growth in data center infrastructure solutions through modular data center investments in tier-2 cities. These investments will enable data center infrastructure management solutions providers to rise. The United States has made several efforts to modernize its infrastructure. For instance, the US Army plans to invest approximately USD 249 million to deploy private cloud computing services and data centers.
- Moreover, the Government of Canada has a 'cloud-first' strategy, whereby cloud services are identified and evaluated as the principal delivery option when initiating information technology investments, initiatives, strategies, and projects. The cloud is also

[www.scotts-international.com](http://www.scotts-international.com)

expected to allow the Government of Canada to harness the innovation of private-sector providers to make its information technology more agile.

- Moreover, Consumer Privacy Act (CCPA) takes effect at the start of 2020 in California, adding to the need for database compliance. The combination of all these factors indicates that companies will need adaptable, secure, efficient database systems, and simple database management tools and processes.

## Database Automation Industry Overview

The database automation market is moderately fragmented owing to the presence of big players in the market and intense competition. The players in the market are adopting strategies such as partnerships and acquisitions to offer the best solutions to the customers and gain a competitive advantage. Factors such as high investment, the presence of established players, and continuously evolving technology act as barriers for new entrants in the market.

In October 2022, Oracle and HSBC launched a strategic partnership to hasten the bank's digital transformation. By the multi-year contract, HSBC was to modernize and move a few database systems to Oracle Exadata Cloud@Customer, a cloud computing platform provided as a managed infrastructure service in HSBC's data centers. The deployment was likely to aid in maintaining and scaling the bank's vital systems and services.

- The market estimate (ME) sheet in Excel format
- 3 months of analyst support

### **Table of Contents:**

#### 1 INTRODUCTION

##### 1.1 Study Assumptions and Market Definition

##### 1.2 Scope of the Study

#### 2 RESEARCH METHODOLOGY

#### 3 EXECUTIVE SUMMARY

#### 4 MARKET INSIGHTS

##### 4.1 Market Overview

##### 4.2 Industry Attractiveness - Porter's Five Forces Analysis

###### 4.2.1 Bargaining Power of Suppliers

###### 4.2.2 Bargaining Power of Buyers

###### 4.2.3 Threat of New Entrants

###### 4.2.4 Threat of Substitutes

###### 4.2.5 Intensity of Competitive Rivalry

##### 4.3 IMPACT OF COVID-19 ON THE GLOBAL DATABASE AUTOMATION MARKET

#### 5 MARKET DYNAMICS

##### 5.1 Market Drivers

###### 5.1.1 Continuously Growing Volumes of Data Across Verticals

###### 5.1.2 Increasing Demand for Automating Repetitive Database Management Processes

**Scotts International. EU Vat number: PL 6772247784**

tel. 0048 603 394 346 e-mail: support@scotts-international.com

www.scotts-international.com

## 5.2 Market Challenges

### 5.2.1 The Need for Human Involvement

## 6 MARKET SEGMENTATION

### 6.1 Component

#### 6.1.1 Solution

##### 6.1.1.1 Database Patch and Release Automation

##### 6.1.1.2 Application Release Automation

##### 6.1.1.3 Database Test Automation

#### 6.1.2 Services

### 6.2 Deployment Mode

#### 6.2.1 Cloud

#### 6.2.2 On-Premises

### 6.3 Enterprise Size

#### 6.3.1 Large Enterprises

#### 6.3.2 Small and Medium-Sized Enterprises

### 6.4 End-user Industry

#### 6.4.1 Banking, Financial Services and Insurance (BFSI)

#### 6.4.2 IT and Telecom

#### 6.4.3 E-commerce and Retail

#### 6.4.4 Manufacturing

#### 6.4.5 Government and Defense

#### 6.4.6 Others (Manufacturing, Media and Entertainment)

### 6.5 Geography

#### 6.5.1 North America

#### 6.5.2 Europe

#### 6.5.3 Asia-Pacific

#### 6.5.4 Latin America

#### 6.5.5 Middle East and Africa

## 7 COMPETITIVE LANDSCAPE

### 7.1 Company Profiles

#### 7.1.1 Oracle Corporation

#### 7.1.2 BMC Software, Inc.

#### 7.1.3 Amazon Web Services, Inc.

#### 7.1.4 SAP SE

#### 7.1.5 IBM Corporation

#### 7.1.6 IDERA, Inc.

#### 7.1.7 Quest Software Inc.

#### 7.1.8 Datavail

#### 7.1.9 CA Technologies (Broadcom Inc)

#### 7.1.10 Bryter US Inc.

## 8 INVESTMENT ANALYSIS

## 9 FUTURE OF THE MARKET
