Report description:

The Malaysia Agrochemicals Market size is estimated at USD 679.59 million in 2024, and is expected to reach USD 849.33 million by 2029, growing at a CAGR of 4.56% during the forecast period (2024-2029).

Key Highlights

- In Malaysia, agriculture is an important industry, as it ensures food security and increases income levels in rural areas. The gradual decline of arable land can be attributed to urbanization. Increasing population statistics and declining arable land are responsible for maintaining adequacy in agricultural practices, ensuring more significant utilization of agrochemical products in the areas that were ignored in the past.
- The use of agrochemicals has been growing significantly in the country, particularly for pesticides and fertilizer consumption, as modern practices are being utilized in fields. The growth of the agrochemical industry also depends on the rapid expansion of areas under oil palm and rubber plantations. Malaysia's oil palm industry is the country's primary agricultural sector and plays a crucial role in world and fat trade. As plantation crops, like oil palm and rubber, consume most agrochemicals in the country, followed by cereals and vegetables, agrochemicals have increased.
- Many local enterprises in Malaysia are expanding into the agricultural sector. The nation is also evolving into a regional hub for pesticide exports, as active chemicals are transferred here to be transformed into fresh goods before being reexported to surrounding countries. Additionally, the increasing government initiatives are becoming a driving factor for market growth. Therefore, the increase in consumption of highly economical crops, food demand, and government support is aiding the market growth in the forecast period.

Decreasing Arable Land and Increasing Demand for Food

Malaysia is an agriculture-dependent country. Culturing valuable crops such as palm oil, rubber, and cocoa has always been important in the region. Food crops such as tropical fruits and rice are essential. For several years, Malaysia's population has been increasing rapidly. According to the World Bank statistics, the population of Malaysia was 32.3 million in 2020, which will increase to 32.7 million in 2021. This growing population is raising the food demand. Supplying food to this ever-increasing population has become a threat.

On the other hand, arable land is declining due to industrialization and urbanization, which decreased production. For instance, according to FAO, the area harvested under rice crops has been falling for several years, dropping ever-increasing from 672,084 ha in 2019 to 645,511 ha in 2020. This reducing arable land reduces agriculture production, negatively impacting the region's growth and leading to food security concerns.

Agrochemicals are known for improving crop productivity on a wide range of crops. So, agrochemical fertilizers have been used for a long time to increase the productivity of crops. Fair and balanced use of agrochemicals will help feed the region's growing population from the available cultivable land. This is expected to boost the demand for agrochemicals such as fertilizers and pesticides in Malaysia.

Along with this, the most potent forces driving the demand for agrochemicals include the need for crop intensification (to increase yields per acre) while pursuing increasingly sustainable practices, seeking natural alternatives to boost production with decreased pressure on the environment, or adding to integrated approaches to close the yield gap. Therefore, the decrease in the arable land and the need for increased production give rise to market growth in the forecast period.

Government support is boosting the Agrochemical sector

Agriculture is the backbone of the Malaysian economy. The increasing food demand due to the rising population is catering to the need for rising productivity. So, the government is taking several initiatives in order to satiate the demand for food. Malaysia's government has been supporting the agriculture business with a variety of measures, attempting to stabilize output and looking for ways to guarantee the sector grows in a healthy and sustainable manner. For instance, in 2022, the Department of Agriculture (DoA) introduced Fertilizer Act to promote agriculture capacities. This includes technical help from the DoA for reinforcing the fertilizer control mechanism, including counterfeit fertilizer management, to enforce the Fertilizer Act.

Along with this, the fertilizer sector currently engages in "self-regulation" in Malaysia. The Act will be utilized to address existing problems affecting Malaysia's fertilizer sector. With this, the problems will be known, and more efficient products will be developed thereby raising production. Additionally, ARISE Plus Malaysia project is implemented by the International Trade Centre provided a series of training has assisted the country in developing a full-fledged pragmatic registration framework for fertilizers that will match Malaysia with the other ASEAN countries. This increased government support is rising the sales of agrochemicals in the country. For instance, according to the Department of Statistics Malaysia the sales of pesticides and agrochemicals in 2020 is 1.88 billion Malaysian ringgit (USD 424.9 million) which increased to 2.68 billion Malaysian ringgit (USD 605.7 million). Therefore, government initiatives is increasing the sales of the agrochemicals that will contribute the market growth in the forecast period.

Malaysia Agrochemicals Industry Overview

The agrochemicals market is fragmented, with significant players including Agricultural Chemicals (M) Sdn Bhd (ACM), Crop Protection (M) Sdn Bhd, Hextar Group, Advansia Sdn Bhd, Sin Seng Huat, and Nufarm. New product launches, mergers and acquisitions, and partnerships are the major strategies the leading companies adopt. These companies are also investing in

innovations, collaborations, and expansions to increase their market share.

Additional Benefits:

- The market estimate (ME) sheet in Excel format
- 3 months of analyst support

Table of Contents:

1 INTRODUCTION

- 1.1 Study Assumptions and Market Definition
- 1.2 Scope of the Study

2 RESEARCH METHODOLOGY

3 EXECUTIVE SUMMARY

4 MARKET DYNAMICS

- 4.1 Market Overview
- 4.2 Market Drivers
- 4.3 Market Restraints
- 4.4 Porter's Five Forces Analysis
 - 4.4.1 Threat of New Entrants
 - 4.4.2 Bargaining Power of Buyers/Consumers
 - 4.4.3 Bargaining Power of Suppliers
 - 4.4.4 Threat of Substitute Products
 - 4.4.5 Intensity of Competitive Rivalry

5 MARKET SEGMENTATION

- 5.1 Product Type
 - 5.1.1 Fertilizers
 - 5.1.2 Pesticides
 - 5.1.3 Adjuvants
 - 5.1.4 Plant Growth Regulators
- 5.2 Application
 - 5.2.1 Crop-based
 - 5.2.1.1 Grains and Cereals
 - 5.2.1.2 Oil Seeds and Pulses
 - 5.2.1.3 Fruits and Vegetables
 - 5.2.2 Non-crop-based
 - 5.2.2.1 Oil Palm
 - 5.2.2.2 Rubber
 - 5.2.2.3 Turf and Ornamental Grass
 - 5.2.2.4 Other Crops

6 COMPETITIVE LANDSCAPE

- 6.1 Most Adopted Strategies
- 6.2 Market Share Analysis
