**Report description:**

The report incorporates the study of the global contract logistics market that focuses on the wide range of services from production to distribution and after-sales services. Companies operating in the global contract logistics market provide standardized warehousing, transport, and other value-added services to form a customized supply chain solution. Further, companies involved in the contract logistics market aim to apply standard solutions and operations assisted by supply chain providers to meet client expectations. At present, the continuous effort of contract logistics companies to offer efficient last-mile deliveries is another opportunity expected to fuel the contract logistics market growth in the near future. For instance, in September 2021, United Parcel Service, Inc. (UPS) announced an agreement to acquire Roadie, an on-the-way delivery service provider within the U.S., which reduced the transit times for same-day deliveries as well as last-mile delivery services across the U.S.

The factors such as growth in e-commerce industry, rise in trade related agreements, and growth in manufacturing industry supplement the growth of the contract logistics market. However, poor infrastructure and higher logistics costs and lack of control of manufacturers on logistics service are the factors expected to hamper the growth of the contract logistics market. In addition, emergence of last-mile deliveries coupled with logistics automation and surge in use of information technologies (IT) solutions & software creates market opportunities for the key players operating in the contract logistics market.

For the purpose of analysis, the global contract logistics market is segmented on the basis of service, type, industry vertical, mode of transportation, and region. By service, the market is divided into transportation, warehousing, distribution, and aftermarket
