**Report description:**

The global digital holography market was valued at \$5,035.7 million in 2021, and is projected to reach \$23,144.1 million by 2031, registering a CAGR of 16.7% from 2022 to 2031. The method in which acquisition and processing of holograms with a CCD camera or a similar device after receiving information then it is transmitted to computer for analysis is called digital holography. Image rendering of object data is achieved numerically from digitized interferograms. Digital holography provides to measure optical phase data and typically delivers optical thickness images or three-dimensional surface.

In addition, this digital holography allows users to control and interact with a holographic display through mobile devices, as it is operable to receive input from the registered mobile users, further boosting the market's growth. Holographic display uses light refraction to develop 3D images that can be viewed without the need for special glasses, making them highly desirable for applications, such as augmented reality and medicine.

The key digital holography market leaders profiled in the report include Lyncee TEC SA, Holoxica Limited, EON Reality, Inc., Phase Holographic Imaging AB (PHI), Holotech Switzerland AG, Holmarc Opto-Mechatronics, Geola Digital Uab, Leia Inc., RealView Imaging and Ovizio imaging systems. These key players adopt several strategies such as new product launch and development, acquisition, partnership and collaboration and business expansion to increase the digital holography market share during the forecast period.

The report includes the study of the digital holography market with respect to the growth prospects and restraints based on the regional analysis. The study includes Porter's five forces analysis of the industry to determine the impact of suppliers, competitors, new entrants, substitutes, and buyers on the market growth.
