Report description:

The dried mushroom market size was \$3,857.8 million in 2021 and is estimated to reach \$8,626.6 million by 2031 registering a CAGR of 8.6% from 2022 to 2031. Mushrooms are distinguished by the presence of high levels of mineral elements that are vital for human health. The major mineral contents of mushrooms are K, P, Na, Ca, Mg, with minor elements such as Cu, Zn, Fe, Mo, and Cd. The mineral content of a mushroom is determined by its species, age, and the diameter of its fruiting body. It also depends on the type of substrate used for mushroom development. Wild edible mushrooms have a higher mineral content than produced ones.

The global dried mushroom market is expanding due to rising demand for organic food and rising consumer health consciousness. Dried mushroom features such as no additional preservatives, natural product, and high vitamin-D content are propelling the worldwide dried mushroom industry. The global dried mushroom market is being driven by macroeconomic factors such as expanding urbanization, rising per capita income, changing lifestyles, and a growing economy. Mergers and acquisitions among dried mushroom market companies, increasing investment in the food industry, and new product releases such as mushroom spices are some of the reasons driving the worldwide dried mushroom market. The company that plays in the dried mushroom industry can enhance its market share by partnership with domestic players, forward integration, and the introduction of organic products.

However, limited production of fresh mushrooms and high mushroom prices as compared to vegetables are considerably expected to hinder the growth of the dried mushroom market during the forecast period. Furthermore, lack of advertisements, limited product categories of dried mushroom for retail sales and lack of motivation for consumption is expected to hamper the growth of the global market.
