**Report description:**

The report incorporates the study of the global engine oil market that focuses on the type of fuel/lubricant which is used to keep the vehicle's engine components lubricated. The main necessity of engine oil is to protect the engine against wear and corrosion, by keeping the engine clean and yield strength under compression. It is available in different Society of Automotive Engineers (SAE) grades to suit the climate, where it is used. Moreover, it also removes small dust & dirt and other contaminants found in vehicle fuels. At present, consumer demand for fuel-efficient and high-performance vehicles is anticipated to provide lucrative opportunities for manufacturers operating in the industry. For instance, in April 2021, Valvoline launched the Valvoline High Mileage 150k with MaxLife™ Plus Technology Synthetic Blend engine oil. This oil was specially designed to meet the unique needs of engines with over 150,000 miles. It also featured superior wear protection, increasing engine performance and power. Therefore, advancement in engine oil qualities to improve the mileage of vehicles is expected to drive the market growth in the forecast period.

The factors such as increase in sales of automobiles in developing countries, growing demand for high mileage vehicles, and demand for lower viscosity motor oil supplement the growth of the engine oil market. However, rise in sales of electric vehicles and fluctuating raw material prices are the factors expected to hamper the growth of the engine oil market. In addition, emerging demand for synthetic engine oil and trend of new rivals entering the engine oil industry creates market opportunities for the key players operating in the engine oil market.

For the purpose of analysis, the global engine oil market is segmented on the basis of grade, sales channel, engine type, vehicle type, and region. By grade, the market is divided into mineral, semi-synthetic, and fully synthetic. By sales channel, it is fragmented into OEM and aftermarket. By engine type, it is categorized into gasoline and diesel. By vehicle type, it is further
