Report description:

E-passport is an electronic passport that contains identity details of travelers such as name, passport number, surname, date of birth, and nationality. In addition, e-passport is created with an electronic microprocessor chip, which contains several biometric information of an applicant such as photos, signatures, and fingerprints. E-passport offers numerous benefits to end-users that includes preventing misuses of passports, storing personal details of travelers digitally, and improving security. In addition, securing accurate identification of passport holders and protection against identity theft are some of the important benefits, which are offered by e-passports. □□ □□

Increase in number of people traveling to cross-border destinations propels the growth of the global e-passport market. In addition, rise in advanced verification technology to detect identity frauds and presence of advanced airport infrastructure among developing nations also boost the e-passport market across the globe. However, availability of cost-effective e-passport and high implementation cost restrict growth of the market. Also, increase in adoption of wireless communication technology among the travel industry is expected to offer remunerative opportunities for expansion of the global market during the forecast period.□□

The global e-passport market is segmented into technology, application, and region. In terms of technology, the market is fragmented into radio frequency identification (RFID) and biometric. Depending on application, it is divided into leisure travel and business travel. Region wise, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.□

The key players operating in the global e-passport market industry include 3M, 4G Identity Solutions, LLC, CardLogix Corporation, Eastcompeace Technology Co., Ltd., Entrust Corporation, HID Global Corporation, Infineon Technologies AG, Muhlbauer Group, Safran, and Thales Group. These players have adopted various strategies to increase their market penetration and strengthen their foothold in the e-passport market industry.
