Report description:

The global pediatric vaccine market accounted for \$2,1371.73 million in 2021, and is expected to reach \$ 3,6390.99 million by 2031, registering a CAGR of 5.4% from 2022 to 2031.

Pediatric vaccine is a biological preparation that is administered to produce acquired immunity in children. Administration of vaccines aids to enhance immune response against a specific pathogen. Pediatric vaccinations play a key role in sustaining children health across different countries; hence, they are used in various national disease-prevention strategies. Owing to the increased occurrence of both viral and bacterial infectious diseases, the demand for vaccines has grown over the past few years. Pediatric vaccinations are primarily provided to children of different ages, improving their immune system during their lives and ensuring defense against various forms of infectious diseases.

It is estimated that pediatric vaccine market is expected to experience significant market growth during the forecast period as there has been surge in adoption in several countries across the globe in the national immunization programs. In addition, rise in prevalence of pneumococcal, influenza, and meningococcal disease in several countries has led to upsurge in demand for vaccines, which further facilitate the growth of the market. However, stringent government regulations for the approval of new vaccines and recall of several products are expected to impede the market growth. In contrast, rise in demand in emerging
