Report description:

Legal analytics is the process of incorporating data into decision-making on topics affecting law firms and lawyers, such as matter forecasting, legal strategy, and resource management. When used appropriately, legal analytics provides a competitive advantage by providing unparalleled transparency and insight into in-house counsel members, departments, and decision-makers. Machine learning implementations are widely used to structure complex legal data in response to increasing technological innovations. Moreover, increasing demand for analytical tools to achieve automated legal organization is another key factor driving the growth of the market. In addition, increased productivity and profitability of law firms boosts market growth. However, the high cost set up of legal analytics and lack of knowledge about analytics technology hamper the market growth. Furthermore, the adoption of machine learning and artificial intelligence in analytics provides ample growth opportunities for market growth. The legal analytics market is segmented on the basis of offering, deployment model, case type, analytics type, end-user, and region. On the basis of offering, the market is categorized into solution and services. By service, the market is bifurcated into professional services and managed services. On the basis of deployment model, the market is classified into on-premise and cloud. By case type, the market is fragmented into commercial case management, intellectual property management, antitrust management, and others. On the basis of analytics type, the market is segregated into descriptive analytics, predictive analytics,
