**Report description:**

The global medical terminology software market was valued at \$0.9 billion in 2022, and is projected to reach \$2.6 billion by 2032, growing at a CAGR of 10.9% from 2023 to 2032. Medical terminology software is a specialized software that provides definitions, pronunciations, and translations of medical terms, as well as information on diseases, treatments, and procedures. This software is designed to help healthcare professionals communicate effectively with each other and with patients, and to ensure accuracy and consistency in medical records. In addition, it can also help to streamline the documentation process, making it easier for healthcare professionals to create and manage medical records. The medical terminology software can be integrated into EHRs to help healthcare professionals document patient information accurately and consistently. Medical terminology software can help healthcare professionals to accurately code and bill for medical procedures.

One of the major factors driving the growth of the medical terminology software market are the rise in the adoption of electronic health records (EHRs). Electronic health records enable healthcare providers to access patient information quickly and easily, without having to sift through paper records. This saves time and improves efficiency, allowing providers to focus on providing better care to patients. For instance, according to 2021 report by The Office of the National Coordinator for Health Information Technology (ONC), 96% of general acute care hospitals had adopted electronic health records.

Furthermore, the growing focus on quality reporting and regulatory compliance among healthcare providers across the world drives the growth of medical terminology software market. For instance, in order to comply with regulatory requirements and to improve quality reporting, healthcare providers are increasingly adopting standardized terminologies, such as SNOMED CT, LOINC, and ICD-10. Medical terminology software can help organizations implement these terminologies and ensure that they are used consistently across the enterprise. Furthermore, Medical terminology software can help improve the accuracy and efficiency of

clinical documentation by providing clinicians with tools that suggest appropriate terms and codes based on the clinical context. This can help reduce errors and ensure that the appropriate codes are used for quality reporting.

In addition, surge in the prevalence of noncommunicable diseases (NCDs) has significantly contributed in the growth of the medical terminology software market. NCDs are chronic diseases that require long-term management and treatment, which involves a lot of documentation and record-keeping. Medical terminology software can help healthcare professionals efficiently document and manage patient information, reducing errors and streamlining the process of data entry. This has become increasingly important as the number of patients with NCDs has grown, creating a greater need for accurate and efficient record-keeping. NFor instance according to the 2022 factsheet of WHO, each year, 17 million people die from a NCD before age 70; 86% of these premature deaths occur in low- and middle-income countries. However, data privacy issues might restrain the growth of the medical terminology software market. Moreover, the integration of artificial intelligence (AI) into medical terminology software presents various new growth opportunities.

The medical terminology software market is segmented into application, end user and region. By application, the market is categorized into clinical trials data aggregation, reimbursement, quality reporting, and others. On the basis of end user, the market is categorized into healthcare providers, healthcare payers, and others. Region-wise, the market is analyzed across North America (the U.S., Canada, and Mexico), Europe (Germany, France, the UK, Italy, Spain, and rest of Europe), Asia-Pacific (Japan, China, Australia, India, South Korea, and rest of Asia-Pacific), and LAMEA (Brazil, South Africa, Saudi Arabia, and rest of LAMEA).
