Report description:

POS security, or point-of-sale security, is the prevention of unauthorized access to electronic payment systems by individuals who are looking to steal customers' personal details such as credit card information. POS security aims to create a safe environment for customers to complete their purchases and transactions, and it is a must-have measure for fostering trust with consumers. The demand for PoS security is increasing as compliance with regulations. Installing a firewall configuration to protect cardholder data, maintaining secure systems & applications and restricting physical access to payment information are some of the important requirements that boost the demand for PoS security software market across the globe. In addition, increased adoption of digital payment modes and rise in fraudulent activities in E-commerce are driving the growth of the market. However, PoS security deployment issues and lack of awareness among employees for the use of PoS systems have emerged as key industry problems. On the contrary, increasing use of payment applications across different industry verticals will further give major opportunity for the PoS security market growth. □□

The PoS security market is segmented on the basis of offering, deployment mode, enterprise size and industry vertical. By offering, it is segmented into solution and services. Based on deployment mode, it is bifurcated into on-premise and cloud. Based on enterprise size, it is segmented into large enterprises and small and medium-sized enterprises. □On the basis of industry vertical, it is segmented into retail, hospitality, entertainment, healthcare, transportation, and others. By region, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
