Report description:

A student loan is a specific type of loan made for students to assist them in covering the costs of their post-secondary education and any related expenses, including tuition, books, supplies, and living costs. The interest rate can be considerably lower than with other loans, and the repayment plan can be postponed while the borrower is still enrolled in school, setting it apart from other forms of loans. The strict regulations that govern bankruptcy and renegotiation vary greatly across different nations. Parents now find it challenging to invest in their kids' education because of the rise in expense of school, rise in prices of courses and high fees demanded by educational institutions. In addition, rise in demand for various additional courses along with educational degrees is driving the growth of the market. These factors notably contribute toward the growth of the global student loan market. However, high repayment prices of student loan and effects on credit score due to defaulting are some of the factors that hamper the market growth. On the contrary, rise in demand for student loans for pursuing additional courses is expected to boost the market growth in future. In addition, surge in fees of educational institutions for specialized courses are expected to provide lucrative opportunities for the market growth in the coming years.

The student loan market is segmented into type, repayment plan, age group, end user, and region. By type, the market is differentiated into federal/government loan and private loan. The federal/government loan is further segmented into federal/government parent student loans and federal/government graduate loan. The federal/government loan is further segregated into direct subsidized loan and direct unsubsidized loan. Depending on repayment plan, it is fragmented into standard repayment plan, graduated repayment plan, revised pay as you earn (REPAYE), income-based (IBR) and others. On the basis of
