Report description:

Rehabilitation is process where a handicapped person back to a normal life through training and therapy. The delivery of rehabilitation services through internet is called as telerehabilitation or e-rehabilitation. Telerehabilitation includes physical therapy, occupational therapy, and speech language audiology therapy, deployment of virtual reality (VR), tele-robotic therapy and gamification through advanced technologies. The proliferation of smart devices, and ability of high-quality video transmission, opened up the possibility of delivering remote healthcare to patients in their homes, workplaces or assisted living facilities as an alternative to in-person visits for both primary and specialty care.□

The growth of the global telerehabilitation market is majorly driven by increase in demand for telerehabilitation services owing to increase in prevalence of neurodegenerative disease such as Alzheimer disease, stroke, and Parkinson's disease. In addition, rise in advanced healthcare technologies such as telehealth contributes toward the market growth. Furthermore, increase in awareness regarding telerehabilitation services in developed countries such as the U.S. boosts the market growth.

Moreover, reduction in healthcare cost due to availability of telerehabilitation services fuel the market growth. However, poor infrastructure and technological barrier in underdeveloped countries and data breach of patient's information may hinder the market growth. For instance, according to the World Economic Forum, cyber-attacks are considered as the top five risks to global stability. This is projected to adversely affect the results and credibility of the companies, thereby impeding the market growth. Conversely, high focus of industry players for launching of new products & technologies and high growth potential in developing economies are anticipated to provide lucrative opportunities to the market players.

The global telerehabilitation market is segmented on the basis of application, component, end user, and region. By application, it is bifurcated into physical therapy, occupational therapy and speech therapy. On the basis of component it is segmented into products and services. The products segment further includes software and hardware. By end user, the market is classified into, healthcare providers and homecare. Region wise, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.□
