Report description:

Urinary drainage bags are used in patients who are suffering from urological conditions such as urinary incontinence (leakage), urinary retention (inability to urinate), bladder cancer, and other health problems to collect the urine. The bag is attached to catheter, which is inserted in bladder to collect the urine. Furthermore, there are several advantages associated with urinary drainage bags, such as it reduces the risk of urinary tract infections, is easy and convenient to use. In addition, maximum number of patients suffering from urinary incontinence cannot perform regular activities confidently, thus, urinary drainage bags are mostly preferred by them.

The growth of global speech therapy market is majorly driven by increase in prevalence of urological disorders, such as urinary incontinence, kidney stones, benign prostatic hyperplasia, and cystitis, which leads to uncontrolled urine. In addition, increase in geriatric population and growing investment by key market players to developed advanced products further fuels the market growth.

Furthermore, rise in geriatric population in developed countries, such as the U.S. drives the market growth. Conversely, lack of awareness about the urinary drainage bags, and growth in concerns regarding catheter associated urinary tract infections are expected to hinder the market growth. However, growth in healthcare expenditures in the developing economies offers lucrative opportunities for the market growth.

The global urinary drainage bags market is segmented into product, usage, end user, and region. On the basis of product, the market is categorized into speech disorder, neurological condition, and others. By age, it is classified into reusable and disposable. On the basis of end user it is classified into hospitals and clinics and others. Region wise, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
